## 1. Description

The STK-CTS/P series current sensor is based on TMR (tunnel magnetoresistance) technology and open-loop design. It is suitable for DC, AC pulsed and any kind of irregular current measurement under the isolated conditions.

### Typical applications

- AC Variable speed drives
- Inverter
- Electric welder power supply
- Switched model power supplies (SMPS)

### General parameter

Parameter	Symbol	Unit	Value
Working temperature	T_A	°C	-40 ~ 105
Storage temperature	T_stg	°C	-40 ~ 105
Mass	m	g	10

Remark 1: The product will not be damaged when used at 105 °C

### Absolute maximum rating

Parameter	Symbol	Unit	Value
Supply voltage	Vcc	V	6
ESD rating (HBM)	U <sub>ESD</sub>	kV	4

Remark 2: the unrecoverable damage may occur when the product works on the conditions over the absolute maximum ratings. Long-time working on the absolute maximum ratings may cause the degradation on performance and reliability.

### Isolation parameter

Parameter	Symbol	Unit	Value	Comment
RMS voltage for AC test 50Hz/1 min	Ud	kV	4	
Impulse withstand voltage 1.2/50μs	Üw	kV	6	
Clearance distance (pri. -sec)	dCI	mm	> 8	Space shortest distance
Creepage distance (pri. -sec)	dCp	mm	> 8	Shortest distance along the body
Shell material			V0 according to UL 94

Note:

8. Accuracy @ RT,X = ((Vout @ In @ 25°C) – (G\_fit \* In+Voff @ 25°C)) / V\_FS, Here In is the current test current. G\_fit is the normal temperature fitting gain.

Accuracy,X\_TRange = ((Vout @ In @ T\_x) – (G\_fit@25°C \* In+Voff @ 25°C)) / V\_FS, The fitting gain of the product at G\_fit@25 °C is 25 °C.

## 7. Frequency band width

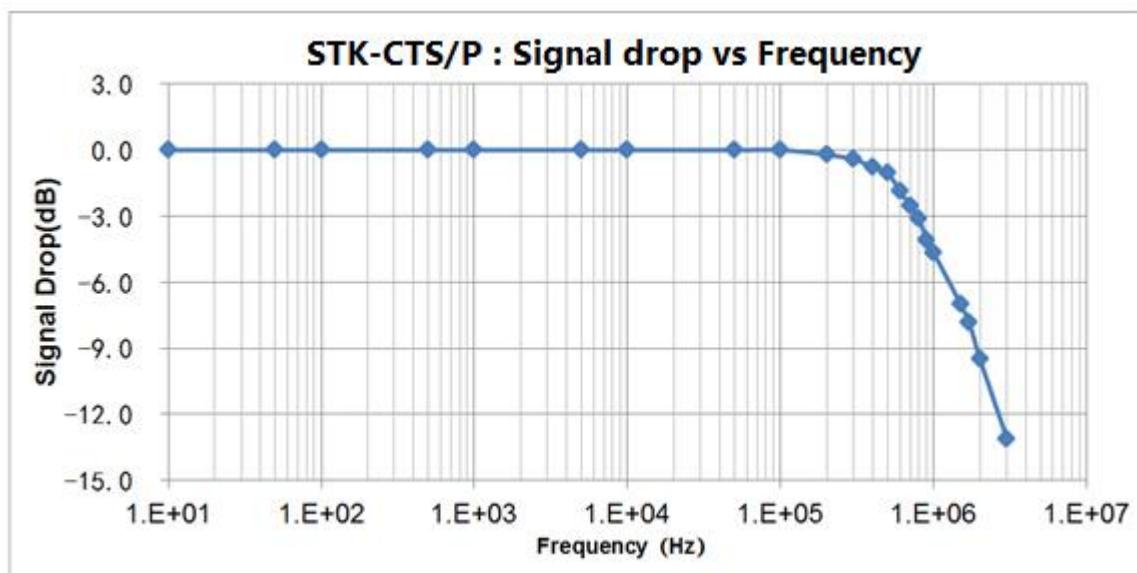

Fig.1 the band width of STK-CTS/P series current sensors. The bandwidth of the sensor is in the range of DC ~400 kHz (-3 dB).

## 8. Response time & noise with typical circuit

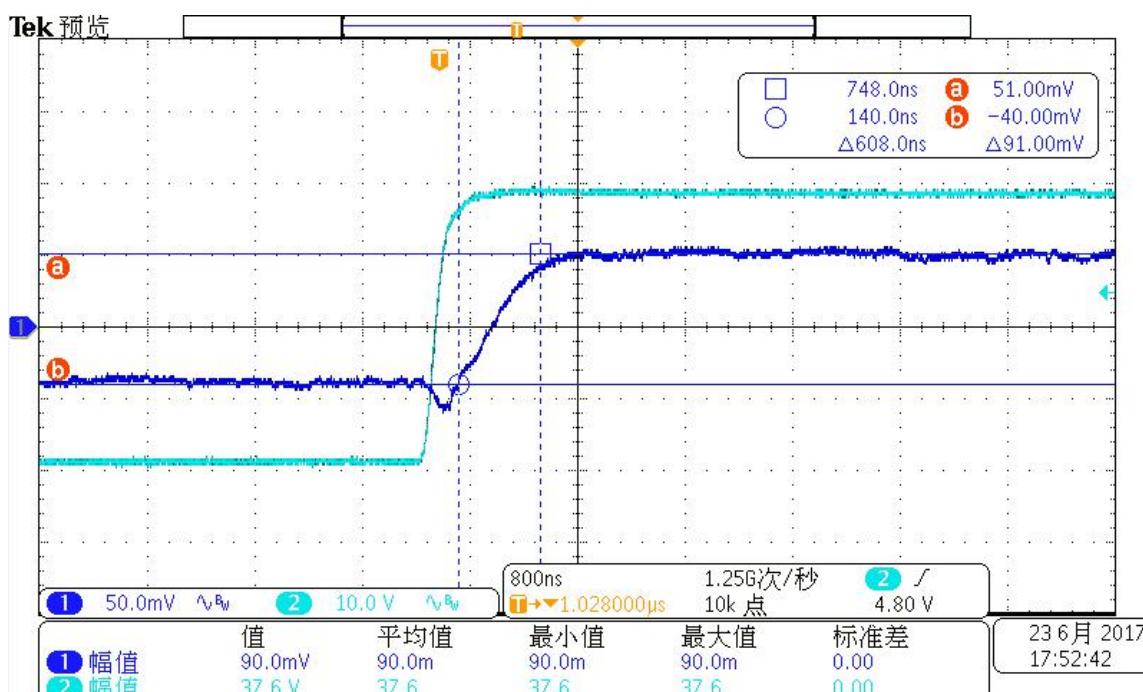

Fig.2 the step response time of STK-CTS/P current sensors. The light blue is primary current, while the dark blue is output signal of current sensor.. The delay from 90% of the original current signal to 90% of the output of the sensor is less than 1us.

## 9. Frequency delay performance

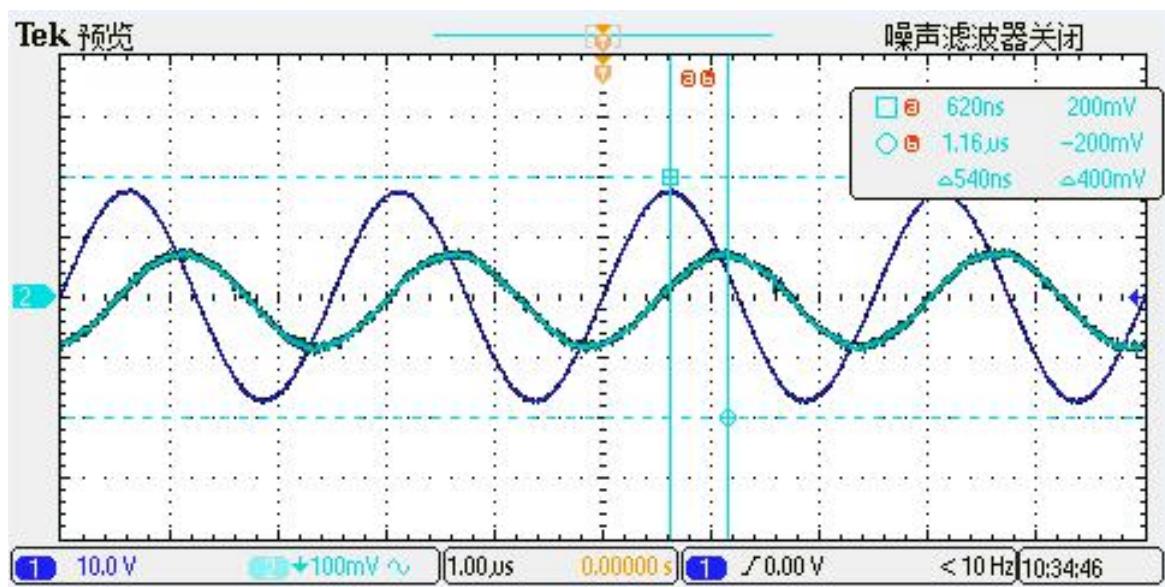

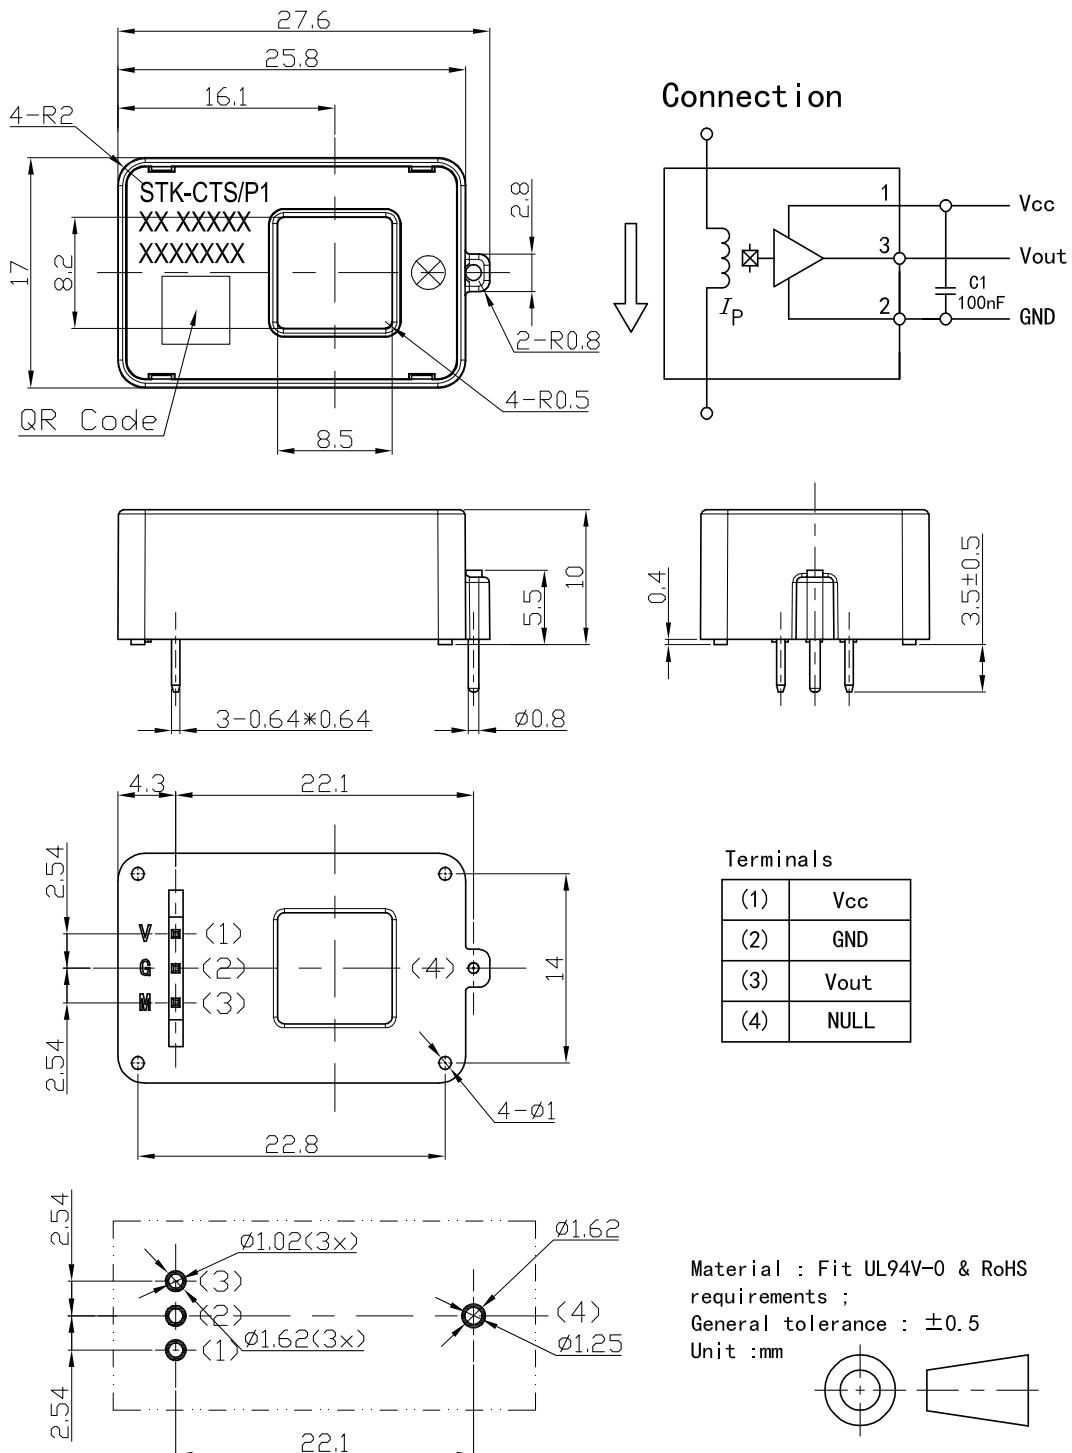

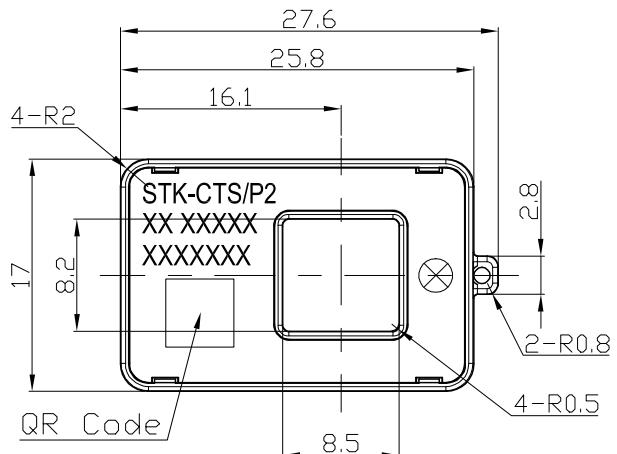

Fig.3 when detection the primary current with a frequency of 400 kHz. The typical results of the output of STK-CTS/P current sensor on the primary current delay characteristics. The delay time from primary current (light blue) to the output of the sensor (dark blue) is less than  $\mu$ s.
