1 Scope:

- 1.1 This specification is applicable to lead free and halogen free of RoHS for LRH 4 terminals low-inductance metal alloy low-resistance resistor.
- 1.2 The product is belong to the universal series.

2 Explanation Of Part Numbers:

3.1 Power Derating Curve:

Operating Temperature Range : - 55 ~+170 $^{\circ}$ C

For resistors operated in ambient temperatures 70°C, power rating shell be derated in accordance with the curve below:

3.2 Rating Current:

The following equation may be used to determine the DC (Direct Current) or AC (Alternating Current) currents (RMS, root mean square value) of normal rated power. However, if the result value exceeds the highest current of regulated standards, the highest normal rated power is to be used.

Remark:

 $I = \sqrt{P/R}$ I = Rating Current(A) P = Rating Power(W) $R = \text{Resistance}(\Omega)$

8.2 Recommend Land Pattern:

When a component is soldered, the resistance after soldering changes slightly depending on the size of the soldering area and the amount of soldering. When designing a circuit, it is necessary to consider the effect of a decrease or increase in its resistance

Туре	# of	Maximum Power Rating	Resistance		Dimensio	ons - in mi	illimeters

8.3 Environment Precautions:

This specification product is for general electronic use, RALEC will not be responsible for any damage, cost or loss caused by using this specification product in any special environment. If other applications need to confirm with RALEC.

If consumer intends to use our Company product in special environment or condition (including but not limited to those mentioned below), then will need to make individual recognition of product features and reliability accordingly.

- (a) Used in high temperature and humidity environment
- (b) Exposed to sea breeze or other corrosive gas, such as Cl2
 H2S
 NH3
 SO2 and NO2.
- (c) Used in non-verified liquids including water, oil, chemical and organic solvents.
- (d) Using non-verified resin or other coating material to seal or coat our Company product.
- (e) After soldering, it is necessary to use water-soluble detergents to clean residual solder fluxes, even though no-clean fluxes are recommended.

8.4 Momentary Overload Precautions:

The product might be out of function when momentary overloaded. Please make sure to avoid momentary overloading while using and preserving •

LRH 4-Terminals Series Metal Alloy Low-Resistance Resistor Product Specifications

8.5 Operation and Processing Precautions:

- (a) Avoid damage to the edge of resistor and protective layer caused by mechanical stress.
- (b) Handle with care when printing circuit board (PCB) is divided or fixed on support body. because bending of printing circuit board (PCB) mounting will make mechanical stress for resistors.
- (c) Make sure the power rating is under the limit when using the resistor. When power rating is over the limit, the resister will be overloaded. There might be machinery damage due to the climbing temperature.
- (d) If the resister will be exposed under massive impact load (shock wave) in a short period of time, the working environment must be set up well before use.
- (e) Please make evaluation and confirmation when the product is well used in your company and have a through consideration of it's fail-safe design to ensure the system safety.

9 Storage and transportation requirement:

- 9.1 The temperature condition must be controlled at 25±5°C, the R.H. must be controlled at 60±15%. The stock can maintain quality level in two years •
- 9.2 Please avoid the mentioned harsh environment below when storing to ensure product performance and its' weldability. Places exposed to sea breeze or other corrosive gas, such as Cl2 VH2S VH3 SO2 and NO2.
- 9.3 When the product is moved and stored, please ensure the correct orientation of the box. Do not drop or squeeze the box. Otherwise, the electrode or the body of the product may be damaged.
